Overlæge advarer: Disse piger får flest bivirkninger af HPV-vaccinen

En overlæge frygter nu, at endnu flere piger vil få alvorlige bivirkninger af hpv-vaccinen.

ORDELIA WEBER OG KATRINE JO ANDERSEN, RADIO24SYV

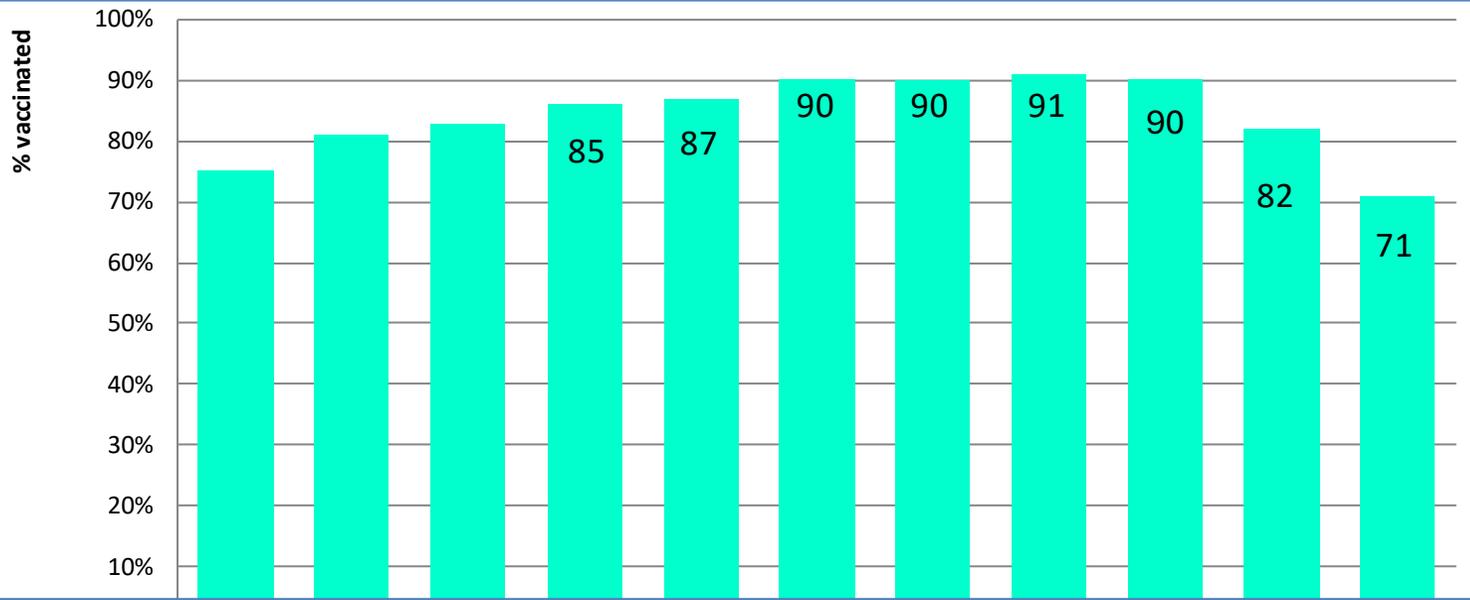

Myndighederne bør advare de tusinder af unge piger, der hvert år vaccineres mod livmoderhalskræft, mod at dyrke meget motion op til vaccinationen. Det siger Jesper Mehlsen, overlæge og forskningschef ved Synkopecentret på Frederiksberg Hospital i København, der har undersøgt 90 piger og kvinder med ofte svære symptomer, der kan være remkaldt af vaccinen.

Warning!

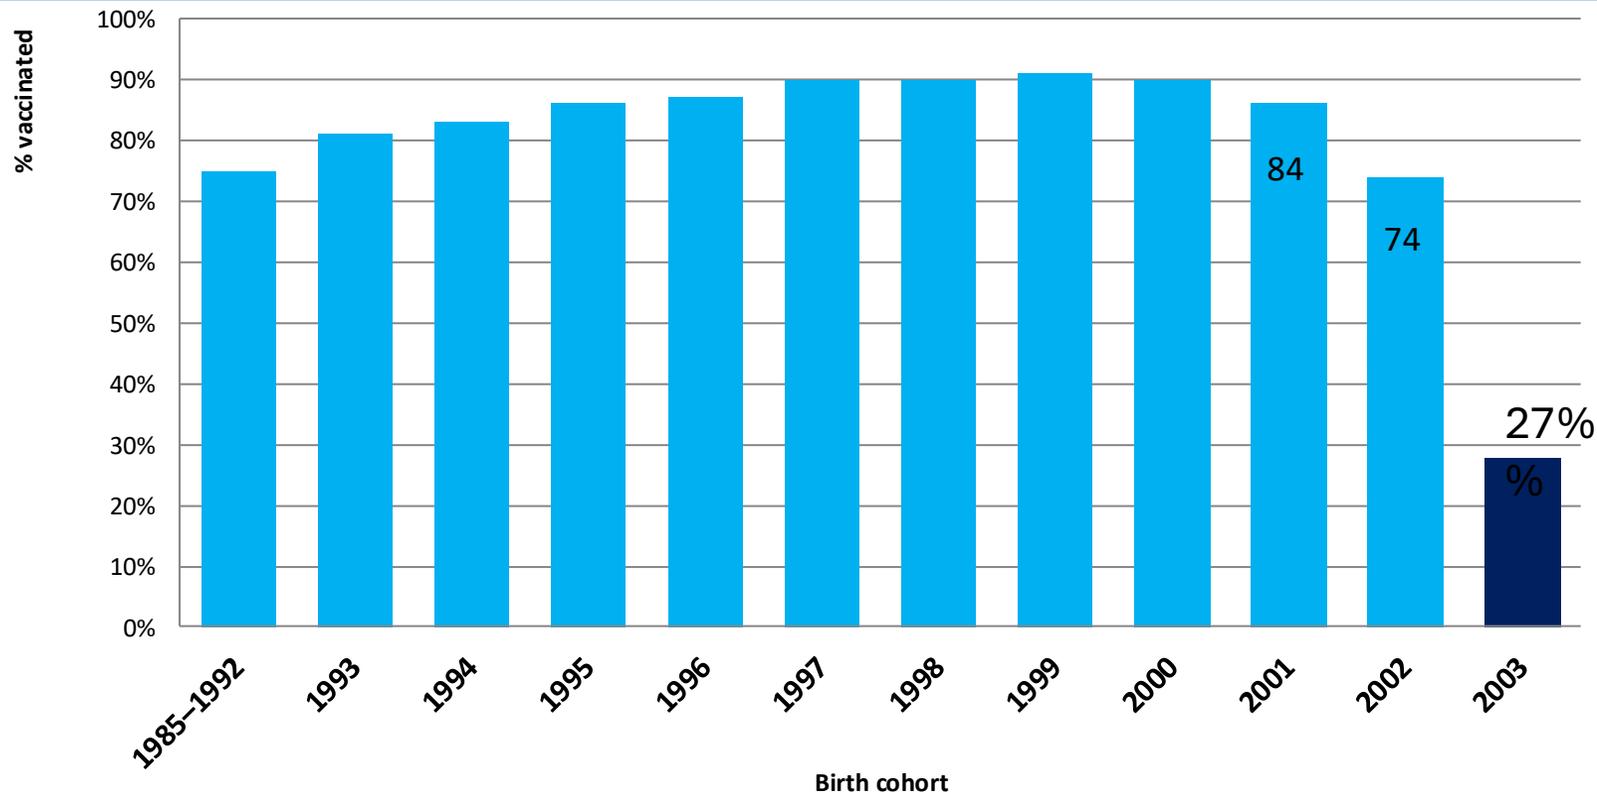

-
- Complex regional pain syndrome (**CRPS**)
- Postural orthostatic tachycardia syndrome (**POTS**)

A large group of young women, likely students, are gathered in a school hallway. They are arranged in several rows, with some standing and some sitting in wheelchairs. The women are dressed in casual attire, including sweaters, blouses, and jackets. The hallway has large windows on the right side, and the overall atmosphere is bright and organized. The text "The vaccinated girls" is overlaid in the center of the image.

The vaccinated girls
